

Using The LHF Carved Gold Template

- 1 Open the file named “LHF Carved Gold Template.psd”. Double-click on the thumbnail image for the layer titled “EDIT THIS LAYER”.

- 2 A window will open so you can edit the text. Highlight the existing text with the Horizontal Type Tool and type your desired text. If you do not have the [LHF Chicago Script](#) font installed, Photoshop will inform you that it will substitute another font (typically Myriad). You can change this font to whatever you like.

- 3 After you have finished editing your text, save the .psb (Smart Object) file and it will return you to the .psd file.

- 4 Review your results. The “Highlights” layer contains 4 sublayers of “hotspots” that can be moved to the lightest areas of the letters to enhance the effect. You can also try changing the bevel effect using the “LHF Gold Title Set” styles (available as a separate download)
